General Instructions: There are 25 questions. Be sure you have them all. Read each question carefully so that you know exactly what is being asked.

Each multiple choice question (1-25) is worth **4 points** and **has only one correct answer**. Bubble in your answers to these questions on the Scantron provided. Only the Scantron will be graded.

At the end of the exam, turn in your Scantron and this signed cover sheet. You may keep the rest of the exam to check your answers against the key later.

Good luck!

1. Dimethyl fumarate, shown below, was approved in March 2013 by the Food and Drug Administration for the treatment of patients with multiple sclerosis.

dimethyl fumarate

Which of these statements about dimethyl fumarate is true?

- All the carbon atoms are sp^2 hybridized.
 - All the carbon atoms are sp^3 hybridized.
 - Dimethyl fumarate contains at least one carboxylic acid.
 - Dimethyl fumarate contains at least one ester.
 - There are six (6) hydrogen atoms in dimethyl fumarate.
2. What is the formal charge on nitrogen in this structure? All lone pairs are shown.

- 2-
 - 1-
 - 0
 - 1+
 - 2+
3. Which of these structures is not a constitutional isomer of the others?

A

B

C

D

E

4. Curved arrows are used to convert one resonance contributor (resonance structure) to another. In this picture, X and Y are contributors to the same resonance hybrid:

Which of these structures shows the correct arrows to convert X to Y?

5. Here are three resonance structures that belong to the same resonance hybrid:

In these structures, all the lone pairs of electrons are shown, but the formal charges are not calculated. You will have to draw them in.

Which of these statements about the structures is correct?

- P is the most minor contributor and R is the major contributor
- P is the most minor contributor and Q is the major contributor
- R is the most minor contributor and P is the major contributor
- Q is the most minor contributor and P is the major contributor
- R is the most minor contributor and Q is the major contributor

6. Which of these structures contains an oxygen atom with sp^3 hybridization?

W

X

Y

Z

- a. W
 - b. W and X
 - c. W, X and Y
 - d. X
 - e. Y
7. What do these three structures have in common?

- a. There is tetrahedral geometry around the central atom.
 - b. All three structures have at least two other *reasonable* resonance structures (e.g., structures with minimized formal charges)
 - c. Each structure has at least one atom with an unhybridized p orbital.
 - d. All three structures are polar.
 - e. The three structures do not share any of the common features listed in choices "a" through "d".
8. Consider the ion He_2^+ . How many electrons are in the antibonding orbital for this ion?
- a. 0
 - b. 1
 - c. 2
 - d. 3
 - e. Cannot be determined from the information given

Questions 9, 10 and 11 relate to Seroquel, a medication prescribed as an anti-psychotic. Here is the structure of Seroquel:

Seroquel (Quetiapine)

9. What is the geometry around the carbon indicated by the arrow?
- trigonal planar
 - linear
 - tetrahedral
 - octahedral
 - bent
10. What is the hybridization of the atom indicated by the arrow?
- sp
 - sp^2
 - sp^3
 - The indicated atom is not hybridized.
11. Which of the following functional groups is present in Seroquel (i.e., which of these names would be a reasonable way to classify this structure)?
- ester
 - ether
 - ketone
 - carboxylic acid
 - amide
12. What is the bond order for H_2^+ ?
- 0
 - 0.5
 - 1.0
 - 1.5
 - None of these

13. Here is the structure of cantharidin, a poisonous compound excreted by blister beetles. Although it has medicinal uses for humans when applied appropriately, it has also been used historically (and illegally) as an aphrodisiac.

Cantharidin

What is the percentage s character in the hybrid orbitals on the oxygen indicated by the arrow? *Note that the lone pairs are not shown in this structure, but all atoms are neutral (zero formal charge).*

- a. 25%
 - b. 33.3%
 - c. 50%
 - d. 66.7%
 - e. 75%
14. How many nodes are there in this orbital? (The picture represents one orbital.)

- a. 0
- b. 1
- c. 2
- d. 3
- e. Cannot be determined from the picture

Questions 15, 16 and 17 involve the structure of carvone. Carvone is a naturally occurring oil found in spearmint, caraway and dill. It is used extensively in food because of its flavor. (According to Wikipedia, Wrigley's spearmint gum is soaked in carvone and coated with sugar.) Use the numbering system on the structure to answer questions.

carvone

15. What orbitals overlap to form the pi bond between C1 and O-2?
- p and p
 - sp^2 and sp^2
 - p and sp^2
 - sp^2 and sp^3
 - sp^3 and sp^3
16. What orbitals overlap to form the sigma bond between C1 and C3?
- p and p
 - sp^2 and sp^2
 - p and sp^2
 - sp^2 and sp^3
 - sp^3 and sp^3
17. Each of the lone pairs on O2 is contained in what type of orbital?
- s
 - p
 - sp
 - sp^2
 - sp^3

18. Here is a molecular orbital diagram for CO, carbon monoxide. The atomic and molecular orbitals are labeled. Even though it is more complicated than the diagrams you have seen, the same principles apply.

According to this diagram, what is the HOMO in CO?

- σ^1
 - σ^3
 - π
 - π^*
 - None of these
19. For the major resonance contributor for CO, what are the formal charges?
- + on carbon, - on oxygen
 - on oxygen, + on carbon
 - zero on carbon, zero on oxygen
 - + on carbon, zero on oxygen
 - zero on carbon, + on oxygen

20. How many hydrogen atoms are on the carbon indicated by the arrow in this structure?

- a. Zero
b. One
c. Two
d. Three
e. Not enough information
21. Which of these structures is a secondary alcohol?

A

B

C

D

E

22. Some of the carbons in this structure are labeled. Which of them is a tertiary carbon?

23. How is this amine classified?

- a. Primary
b. Secondary
c. Tertiary
d. None of these

24. Sabinene and limonene are compounds called “terpenes” that are commonly produced by plants. For example, sabinene is isolated from oak and spruce oils and is also responsible for some of the flavor of black pepper. Limonene is isolated from the rind of citrus fruits and is used in perfumes and cleaning products.

sabinene

limonene

Are sabinene and limonene constitutional isomers?

- a. Yes
 - b. No
25. Justinbieberone is a toxic compound produced by the pet monkeys of teen pop stars. Exposure to this compound causes obnoxious behavior. Unfortunately, its effects are permanent.

Which of the functional groups listed below does NOT appear in this compound?

- a. ester
- b. amine
- c. epoxide
- d. ketone
- e. carboxylic acid
